Business Requirement Document

PREPARED FOR

Ruby Red Sales & Services

Ruby Red - Website & Mobile App for Online Ordering (B2B and Retail)

System: Responsive Website, iOS & Android Mobile Apps with Web Admin Dashboard

October 14, 2026

PREPARED BY

Sagar Prajapati
Wappzo Infotech Pvt Ltd

wappzo.

1. Introduction

1.1 Project Name

Ruby Red - Online Ordering Website and Mobile App (iOS and Android) for Business and Retail Customers

1.2 Background

- Ruby Red Sales & Services is an exotic snacks, beverages, chocolates, toys, novelty items, phone chargers, and vape products distributor based in Houston, Texas, led by Salim NM (Owner).
- The company currently serves convenience stores, travel centers, and some supermarkets through traditional ordering channels.
- The client wants a website and a mobile app that let existing business customers order online, and that also give Ruby Red a platform to reach individual retail customers through TikTok, Facebook Marketplace, and Instagram.

1.3 Problem Statement

- Existing business customers place orders through manual channels (calls, messages, or sales visits), which is slow, hard to track, and prone to errors.
- Ruby Red has no digital storefront, so new products and promotions are not easy for customers to discover.
- Individual retail customers who find Ruby Red on social media have no simple place to browse products and buy.
- Social media traffic is not connected to an ordering system, so the team cannot measure which channels bring in sales.
- Business and retail customers need different pricing, minimum order rules, and checkout flows, which a single manual process cannot handle well.
- Age-restricted products (such as vapes) require age and business verification and must be handled in line with legal and platform rules.

1.4 Proposed Solution

A digital ordering platform made up of a customer-facing website, an iOS and Android mobile app, and a web Admin Dashboard, all connected to one backend. Existing business customers (B2B) register, get approved, and see wholesale pricing, case-pack quantities, and reorder options. Individual retail customers (B2C) browse the public catalog, add items to a cart, verify their age where required, and pay online. Social media channels link directly to product and category pages so that followers can move from a post to a purchase quickly. The Ruby Red team manages products, prices, stock, customers, orders, and promotions from the Admin Dashboard, and customers receive order updates by push notification, email, and SMS.

1.5 Key Objectives

- Let existing convenience store, travel center, and supermarket customers browse and order online at any time.
- Create a retail channel that lets individual customers buy from Ruby Red through the website and app.
- Drive traffic from TikTok, Facebook Marketplace, and Instagram to product pages with shareable links.
- Shorten the order cycle with saved carts, quick reorder, and clear order tracking.
- Support separate pricing and rules for business and retail customers.
- Handle age-restricted products with verification and access controls.
- Give the Ruby Red team one dashboard to manage catalog, customers, orders, payments, and promotions.
- Build a foundation that can grow with more products, customers, and sales channels.

1.6 Expected Business Benefits

- Faster, more accurate order placement with fewer phone calls and manual entries.
- Higher repeat orders from business customers through reorder shortcuts and promotions.
- New revenue from individual retail customers reached through social media.
- Better visibility into sales, best-selling products, and customer behavior.
- Less admin workload for the sales and support team.
- A stronger brand presence for Ruby Red's exotic product range.
- A scalable platform for new product categories, delivery areas, and channels.

1.7 Target Users

User Group	Primary Platform
B2B Customer (convenience stores, travel centers, supermarkets)	Website and iOS / Android mobile app
Retail Customer (individual consumers from social media)	Website and iOS / Android mobile app
Admin / Sales & Support Team (Ruby Red staff)	Web Admin Dashboard

1.8 High-Level System Overview

Business customers register on the website or app, upload their business details, and are approved by the Ruby Red team. Once approved, they see wholesale prices and case-pack quantities, build orders, reuse past orders, and pay by their approved method. Individual retail customers can browse the public catalog, add items to a cart, confirm their age where required, and check out with an online

payment. Social media posts on TikTok, Facebook Marketplace, and Instagram link directly to product pages so that interested followers can buy without extra steps. After an order is placed, the Ruby Red team confirms it, prepares it, and delivers or ships it, while the customer follows each status in the app and receives notifications. The Admin Dashboard lets the team manage products, prices, stock, customers, orders, payments, and promotions in one place.

2. Scope of the System

The system is organized into four functional layers:

A. Customer Experience (Website and Mobile App)

- Account and profile, product catalog by category, search and filters, wishlist, product detail pages, cart, wholesale and retail pricing, promotions, checkout, payment, delivery selection, order tracking, reorder, order history and invoices, support requests, ratings, and notifications.

B. Business (B2B) Features

- Business registration and approval, wholesale price lists, case-pack and minimum order rules, quick reorder, saved order templates, invoices, and optional credit terms (to be confirmed).

C. Admin Dashboard (Web)

- Management of customers, products, categories, prices, stock, orders, payments, promotions, social links, support requests, and reports, with search, filters, and exports.

D. Backend / API and Integration Infrastructure

- Shared services layer: authentication, business logic, data and image storage, search, pricing and promotion rules, order processing, payment gateway, tax calculation, age and business verification, delivery and shipping, notification dispatch (push, email, and SMS), social sharing links and analytics, and audit logging, consumed by the website, mobile apps, and Admin Dashboard.

Access to features is controlled by customer type and role (B2B Customer, Retail Customer, Admin).

Assumed Out of Scope for Phase 1 (to be confirmed)

- Selling directly inside TikTok, Facebook Marketplace, or Instagram Shops (the platform links to Ruby Red pages; direct in-platform listings are managed separately).
- Automatic posting of products to social media accounts.
- Full accounting, ERP, or warehouse management replacement (integration with the existing system is limited to what is agreed).
- Driver or delivery route management apps.
- In-app chat, live selling, and customer loyalty programs.
- Multi-language support beyond English.

3. User Accounts & Permissions

- **B2B Customer:** A business account (store, travel center, or supermarket) approved by Ruby Red. Sees wholesale pricing, places bulk orders, reorders, and views invoices. May have several users (for example owner and store manager), to be confirmed.
- **Retail Customer:** An individual who registers or checks out as guest, browses the public catalog, buys at retail prices, and tracks orders.
- **Admin:** Ruby Red staff using the Admin Dashboard. Manages catalog, customers, orders, payments, promotions, and support. Admin permission levels (for example Super Admin, Sales, and Support) are to be confirmed.

The table below summarizes the main capabilities by account type.

Capability	B2B Customer	Retail Customer	Admin
Browse catalog and search	Yes	Yes	View
See wholesale pricing	Yes (after approval)	No	Manage
See retail pricing	Optional	Yes	Manage
Add to cart and checkout	Yes	Yes	Create on behalf (optional)
Quick reorder and order templates	Yes	Past orders only	View
Pay on account / credit terms	If approved (TBC)	No	Approve, set limits
Age-restricted products	Yes, after verification	Restricted (TBC)	Manage, review verification
Order tracking and invoices	Yes (own)	Yes (own)	View all
Support request and rating	Yes	Yes	Review, respond
Manage products, prices, stock	No	No	Yes
Approve business accounts	No	No	Yes
Promotions and coupons	Receive	Receive	Manage
Reports and exports	No	No	Yes

4. Authentication & User Management

Users create an account with email or phone number and password and verify it with a one-time code (social sign-in to be confirmed). Forgot Password and Update Password are available. Retail customers may check out as a guest where age rules allow. Users can edit their name, business name (B2B), contact details, and manage saved delivery addresses. B2B accounts may add and remove staff users. Users can deactivate their account. The Admin can suspend or reactivate any account, which blocks login but keeps order history.

5. Business Registration & Account Approval

B2B customers register with their business name, contact person, address, phone, email, and the documents Ruby Red requires (for example sales tax resale certificate and tobacco or vape retail permit where applicable, to be confirmed). The account is created as Pending. The Ruby Red team reviews the details and approves, rejects, or asks for more information. After approval, the customer sees wholesale pricing, minimum order rules, and any agreed credit terms. Existing customers can be imported or invited by the Admin so they do not need to register from scratch. Retail customers do not need approval.

Customer Statuses

Pending Approval, Approved, Rejected, Suspended, and Deactivated.

6. Product Catalog

The catalog is managed by the Admin. Each product includes:

- Name, description, brand, SKU, category, and up to 8 photos.
- Pack size, units per case, weight, flavor or variant, and country of origin (for exotic items).
- Retail price and wholesale price (including tiered pricing by quantity, to be confirmed).
- Stock quantity, minimum order quantity, and availability status.
- Flags for New Arrival, Featured, Limited Stock, and Age-Restricted.

Proposed categories: Exotic Snacks, Beverages, Chocolates, Toys, Novelty Items, Phone Chargers & Accessories, and Vapes (age-restricted). Final categories, sub-categories, and brand list are to be provided by the client.

Product Statuses

Draft, Active, Out of Stock, Hidden, and Discontinued. Admin can bulk upload and update products and prices by Excel or CSV file (to be confirmed).

7. Search, Filters & Wishlist

Customers can search by keyword and browse by category. Filters include category, brand, price range, pack size, availability, new arrivals, and promotions. Results can be sorted by relevance, newest, and price (low to high and high to low). Customers can save products to a Wishlist or Favorites list. B2B customers can also see Frequently Ordered and Recently Ordered lists. Customers can be notified when a saved item is back in stock or goes on promotion.

8. Product Detail Page

The detail page shows a photo gallery (swipe and zoom), name, price for the customer type, pack and case information, stock status, description, brand, category, and related products. Customers can add

to cart, choose quantity or case count, save to wishlist, and share the product by link. Each product page has a clean public link that can be used in TikTok, Facebook Marketplace, and Instagram posts and bios. Age-restricted products show a notice and are only available after the required verification.

9. Cart, Pricing & Promotions

Customers add products to a cart, change quantities, and see the running total with taxes and delivery charges before checkout. The cart is saved between sessions and devices for logged-in users.

Pricing Rules

- Retail customers see retail prices. Approved B2B customers see wholesale prices.
- Minimum order value and case-pack rules apply to B2B orders (values to be confirmed).
- Customer-specific prices or discounts can be set by the Admin (to be confirmed).

Promotions

The Admin can create coupon codes, percentage or amount discounts, bundle deals, free delivery thresholds, and limited-time offers, targeted to B2B, Retail, or both. Special social media promo codes can be created to track which channel brought each sale.

10. Checkout, Payments & Taxes

Checkout steps are: confirm delivery address or pickup, review item prices, taxes, delivery fees, and discounts, choose a payment method, and place the order. Payments are processed by a third-party payment gateway so that card details are never stored by Ruby Red. A confirmation screen and email or SMS receipt are provided.

Payment Methods (to be confirmed)

- Retail: credit and debit card, Apple Pay, and Google Pay.
- B2B: credit and debit card, ACH or bank transfer, pay on delivery, and pay on account (credit terms) for approved customers.

Taxes

Sales tax is calculated according to Texas and applicable rules. Tax-exempt B2B customers with a valid resale certificate are handled by the Admin. Tax rules, excise taxes on specific products, and certificate handling are to be confirmed with the client's tax advisor.

11. Delivery, Pickup & Order Tracking

Ruby Red delivers to business customers in its service area using its own delivery routes, and offers pickup if enabled (to be confirmed). Retail orders can be shipped through a shipping carrier or delivered locally (to be confirmed). Customers can choose delivery or pickup, a preferred date where

available, and see delivery fees at checkout. Each order shows status updates and, where a carrier is used, a tracking number. Delivery areas, delivery days, cut-off times, and fees are to be provided by the client.

Order Tracking Statuses

Order Placed, Confirmed, Being Packed, Out for Delivery or Ready for Pickup, Delivered, Completed, Cancelled, and Refunded.

12. Age Verification & Regulatory Compliance

Ruby Red sells age-restricted products (such as vapes), so the platform must enforce age and business checks:

- A confirmed minimum age of 21 for age-restricted products, with an age gate at registration and again at checkout.
- Identity-based age verification (for example ID scan or third-party service) for retail purchases of restricted items, with delivery signature by an adult 21+ where required (to be confirmed).
- B2B approval that checks the business's license or permit before restricted products are shown.
- Admin control to mark any product as age-restricted and to block specific products or states.
- A record of each verification for audit.

Platform and Legal Considerations

Apple App Store, Google Play, TikTok, Facebook, and Instagram have strict policies on vape and tobacco-related products and may reject apps or remove posts and accounts that promote or sell them. Federal, Texas, and carrier shipping rules for vape products also apply. For Phase 1, the recommended approach is to show age-restricted products only to approved, logged-in B2B customers, not to promote them on social media, and not to include them in retail listings on the mobile app unless confirmed as allowed. The final approach must be confirmed by the client with a legal advisor.

13. Returns, Complaints & Support

Customers can raise a support request from an order for a missing item, damaged item, wrong item, or a pricing issue, with a description and photos. The Admin reviews the request and decides: replacement, credit note, partial or full refund, or rejection. All steps are recorded and the customer is notified of the decision. Return and refund rules, time limits, and rules for restricted or perishable items (for example snacks and beverages) are to be confirmed by the client. Customers can also contact Ruby Red through a contact form, phone, or email shown in the app.

14. Ratings & Reviews

After an order is delivered, retail customers can rate products from 1 to 5 stars and leave a comment, once per purchased product. Product ratings appear on product pages. B2B customers can send private feedback on orders and delivery. The Admin can approve, hide, or remove reviews that break the rules. Whether reviews are enabled for B2B customers and for age-restricted products is to be confirmed.

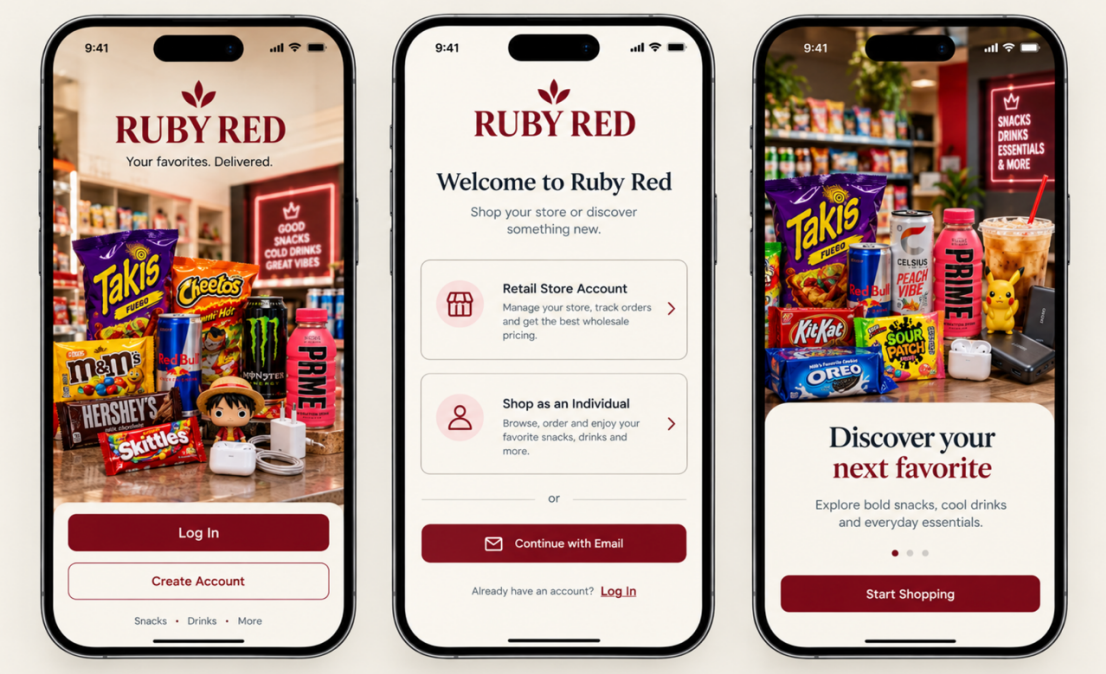

15. Social Media Integration & Marketing

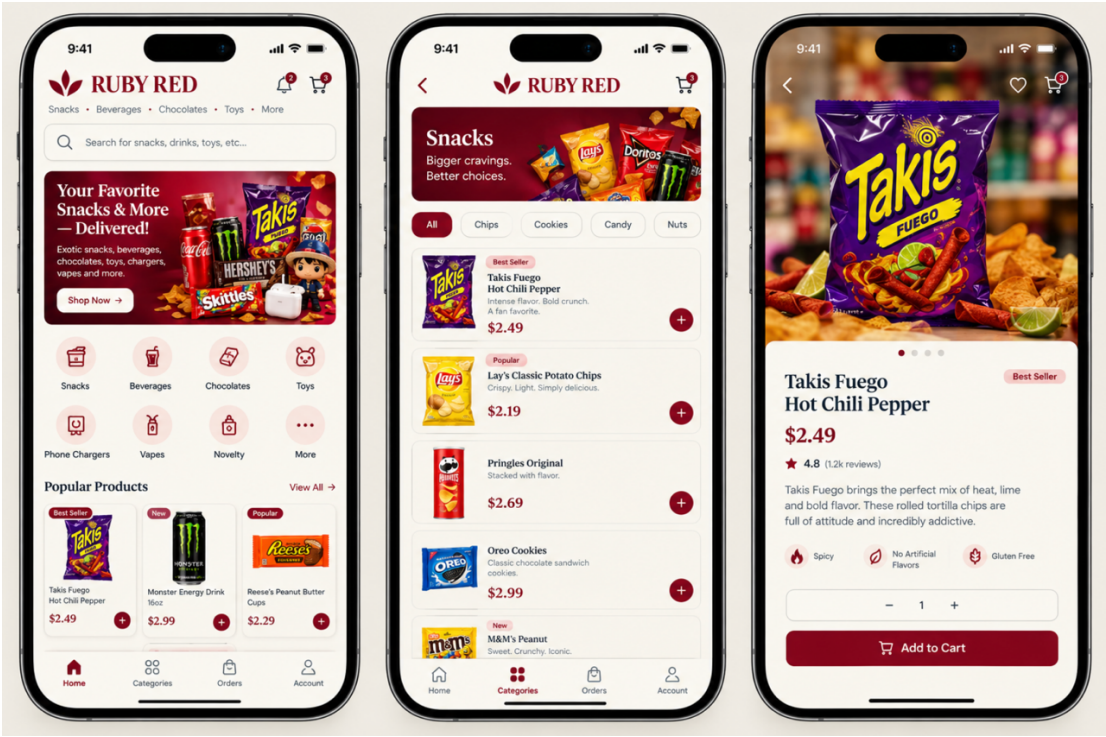

The platform supports Ruby Red's presence on TikTok, Facebook Marketplace, and Instagram:

- Every product, category, and promotion has a short, shareable link that opens the right page in the app or website.
- Link previews show the product image, name, and price when shared.
- Campaign tracking links (UTM tags) and promo codes allow the Admin to see which channel drives visits and orders.
- Social profile links and a "Follow us" section appear on the website and app.
- The website supports analytics and marketing pixels (such as Meta Pixel and TikTok Pixel) where allowed, to be confirmed.
- Customers can share products they like with friends.

Direct product posting and automatic listing sync to Facebook Marketplace or Instagram Shops are not part of Phase 1 unless confirmed.

Demo UI Based on the Requirement:

Note: This dashboard mockup is for design reference only, illustrating the proposed Ruby Red admin interface and its key features; all displayed data is illustrative and subject to change during development.

Admin Dashboard

16. Order Management & Reordering

Customer Order Management

Customers see all purchases in My Orders with status, items, prices, taxes, delivery details, and invoice or receipt. They can reorder a past order in one tap, cancel an order before it is confirmed, and raise a support request.

B2B Order Tools

B2B customers can save order templates (for example weekly order), use quick-add by SKU, upload an order list (to be confirmed), view invoices and account balance (if credit terms apply), and download statements.

Order Statuses

Pending Payment, Placed, Confirmed, Packed, Out for Delivery, Delivered, Completed, Cancelled, Refunded, and On Hold. The order status updates from payment, packing, and delivery events by the Admin or the integrated carrier.

17. Notifications

Push notifications (with email and SMS as backup for key events) are sent for: account approval or rejection, order placed, order confirmed, out for delivery, delivered, payment received or failed, invoice ready, back-in-stock and price-drop alerts for saved items, new arrivals and promotions, support request updates, and account actions by the Admin. Marketing messages require customer opt-in. Users can manage notification preferences in settings (to be confirmed which types are optional).

18. Admin Dashboard

A secure web dashboard for the Ruby Red team. It opens on an overview with key counts, sales, and recent activity, and includes the following modules:

- **Customers:** Search and filter B2B and retail customers, approve or reject business accounts, view orders, set pricing group and credit terms, suspend or reactivate accounts.
- **Products:** Add, edit, and bulk upload products, photos, prices, stock, categories, and age-restricted flags.
- **Orders:** View, confirm, update status, print pick lists and invoices, assign delivery, filter and export.
- **Payments:** View payments, refunds, and balances by customer; record offline payments.
- **Promotions:** Create and manage coupons, discounts, and campaign or social links.
- **Support:** Review support requests, add notes, and record the resolution.
- **Reports:** Sales by period, product, category, customer type, and channel; top products; reorder frequency.
- **Settings:** Manage categories, tax, delivery areas and fees, minimum order values, notification templates, and admin users and roles.

Filters by date range, status, customer type, and category, and export to CSV/Excel and PDF, are available for orders, payments, and customers.

19. Security, Privacy & Data Retention

All data travels over HTTPS and passwords are stored encrypted (hashed). Card data is handled only by the payment gateway, so Ruby Red never stores it. Uploaded business documents and age verification data require encryption and restricted access. Admin access is role-based and all key actions are logged. Personal data handling must follow applicable privacy laws in the United States and Texas (to be confirmed with the client's legal advisor). Customers can request deletion of their data, subject to legal and financial record-keeping. Order, invoice, tax, and age verification records are retained as required by law. Regular backups are required. Hosting region is to be confirmed.

20. Functional Requirements

ID	Module	Requirement
FR-01	Accounts	The system shall support B2B Customer, Retail Customer, and Admin accounts.
FR-02	Authentication	Users shall register and log in with email or phone and password and verify with a one-time code.
FR-03	Authentication	The system shall provide Forgot Password, Update Password, and logout.
FR-04	Profile	Users shall edit their profile and manage saved delivery addresses.
FR-05	B2B Registration	Business customers shall register with business details and documents and remain Pending until approved by the Admin.
FR-06	B2B Registration	The Admin shall approve, reject, or request more information for business accounts and shall be able to import or invite existing customers.
FR-07	Catalog	The Admin shall create and manage products with photos, category, brand, pack size, retail and wholesale prices, and stock.
FR-08	Catalog	Products shall belong to categories and shall be flagged as New, Featured, or Age-Restricted where applicable.
FR-09	Pricing	The system shall show retail prices to retail customers and wholesale prices to approved B2B customers.
FR-10	Pricing	The system shall enforce minimum order quantity and case-pack rules for B2B orders.
FR-11	Search	Customers shall search by keyword and browse by category.
FR-12	Filters	The system shall provide filters (category, brand, price, availability, promotion) and sorting.
FR-13	Wishlist	Customers shall add and remove wishlist items and view their wishlist.
FR-14	Product Detail	The system shall show a product detail page with gallery, price, pack information, stock, and add-to-cart.
FR-15	Cart	Customers shall add, edit, and remove cart items, with the cart saved for logged-in users.
FR-16	Promotions	The Admin shall create coupons, discounts, and promotions targeted to B2B, Retail, or both.
FR-17	Checkout	The system shall provide checkout with address or pickup, price summary (items, taxes, delivery, discounts), and payment.
FR-18	Payments	Payments shall be processed through a third-party gateway; card details shall not be stored by the system.
FR-19	Payments	The system shall support the agreed payment methods for each customer type, including pay on account for approved B2B customers.
FR-20	Taxes	The system shall calculate sales tax and handle tax-exempt B2B customers.
FR-21	Delivery	Customers shall choose delivery or pickup, and the system shall apply delivery areas, fees, and cut-off rules.

ID	Module	Requirement
FR-22	Tracking	The system shall show order status updates and tracking details to the customer.
FR-23	Age Verification	The system shall require age confirmation and verification before age-restricted products can be purchased.
FR-24	Age Verification	The system shall restrict age-restricted products to eligible accounts and keep a verification record.
FR-25	Reorder	Customers shall reorder a past order and B2B customers shall save order templates.
FR-26	Orders	Customers shall view orders with status, invoice or receipt, and cancel before confirmation.
FR-27	Orders	The order status shall update based on payment, packing, and delivery events.
FR-28	Support	Customers shall raise support requests for orders with description and photos; the Admin shall record the outcome.
FR-29	Refunds	The Admin shall issue full or partial refunds and credit notes.
FR-30	Reviews	Customers shall rate (1-5 stars) and review purchased products once per order.
FR-31	Social	The system shall provide shareable links for products, categories, and promotions with link previews.
FR-32	Social	The system shall support campaign tracking links, promo codes, and analytics or marketing pixels.
FR-33	Notifications	The system shall send push notifications (and email or SMS for key events) for account, order, payment, and promotion events.
FR-34	Admin Dashboard	The Admin Dashboard shall show an overview with counts of customers, orders, sales, and support requests.
FR-35	Admin Customers	The Admin shall search, view, approve, suspend, and reactivate customers and set pricing group and credit terms.
FR-36	Admin Products	The Admin shall add, edit, hide, and bulk upload products and manage stock.
FR-37	Admin Orders	The Admin shall view, filter, update, and export orders and print invoices and pick lists.
FR-38	Admin Reports	The Admin shall view sales reports by period, product, category, customer type, and channel.
FR-39	Admin Settings	The Admin shall manage categories, tax, delivery areas, minimum order values, and admin roles.
FR-40	Audit	The system shall log key user and admin actions with user, time, and change details.

21. Non-Functional Requirements

ID	Category	Requirement
NFR-01	Security	All traffic shall use HTTPS; passwords shall be stored hashed; sessions shall expire after inactivity; Admin Dashboard login shall be protected (two-step verification recommended).
NFR-02	Payment Security	Card payments shall go through a PCI DSS-compliant payment gateway; card data shall never be stored on Ruby Red servers.
NFR-03	Access Control	Users shall access only their own data; Admin features shall be restricted by role.
NFR-04	Privacy	Business documents and age verification data shall be encrypted and handled in line with applicable laws (to be confirmed).
NFR-05	Platform Support	Apps shall support current and recent versions of iOS and Android (minimum versions to be confirmed); the website and Admin Dashboard shall support current Chrome, Edge, Safari, and Firefox on desktop and mobile.
NFR-06	Performance	Standard screens shall load within 3 seconds under normal load; lists shall be paginated; images shall be compressed and loaded progressively.
NFR-07	Scalability	The system shall scale to growing customers, products, and orders without structural change.
NFR-08	Availability	Target availability of 99.5%, with planned maintenance outside peak hours.
NFR-09	Usability	The website and app design shall be clean, simple, and fast to use for busy store owners as well as retail shoppers, following iOS and Android design guidelines.
NFR-10	SEO & Sharing	Public pages shall be search-engine friendly, have clean links, and show proper previews when shared on social media.
NFR-11	File Handling	Image and document uploads shall enforce type, size, and count limits and be stored securely.
NFR-12	Auditability	Key actions shall be recorded with user, time, and change details and cannot be edited by users.
NFR-13	API-First	The website, mobile apps, and Admin Dashboard shall use the same secured backend APIs.
NFR-14	Backup & Recovery	Regular automated backups with a documented restore procedure.
NFR-15	Data Retention	Order, payment, tax, and verification records shall be retained as required by law; other data per the agreed privacy policy.

22. Acceptance Criteria

The key acceptance criteria below will be confirmed with the client and used for testing and sign-off.

Area	Acceptance Criteria
Accounts	A user can register, verify, log in, and reset a forgotten password; B2B and Retail accounts show the correct features.

Area	Acceptance Criteria
B2B Approval	A business can register and upload documents; the Admin can approve or reject; only approved accounts see wholesale prices.
Catalog	The Admin can publish a product with photos, prices, pack size, and stock, and it appears in the right category.
Search & Filters	A customer can search and filter products and results update correctly.
Cart & Pricing	The cart shows correct totals for each customer type, including minimum order and case-pack rules and discount codes.
Checkout & Payment	A customer can complete checkout and pay by an allowed method; the order is created and a receipt is sent.
Taxes	Sales tax is calculated correctly, and tax-exempt B2B orders are handled as configured.
Age Verification	Age-restricted products cannot be purchased without the required verification and are hidden from ineligible accounts.
Delivery & Tracking	A customer can choose delivery or pickup and follow order status until delivery.
Reorder	A customer can reorder a past order; a B2B customer can save and reuse an order template.
Support & Refunds	A customer can raise a support request with photos; the Admin can refund, replace, or reject and the customer is notified.
Social Sharing	A product link shared on TikTok, Facebook, or Instagram opens the right page with a correct preview; promo code orders appear in channel reports.
Notifications	Customers receive notifications for order, payment, and promotion events.
Admin Dashboard	The Admin can manage customers, products, orders, payments, promotions, and support, and export filtered data.

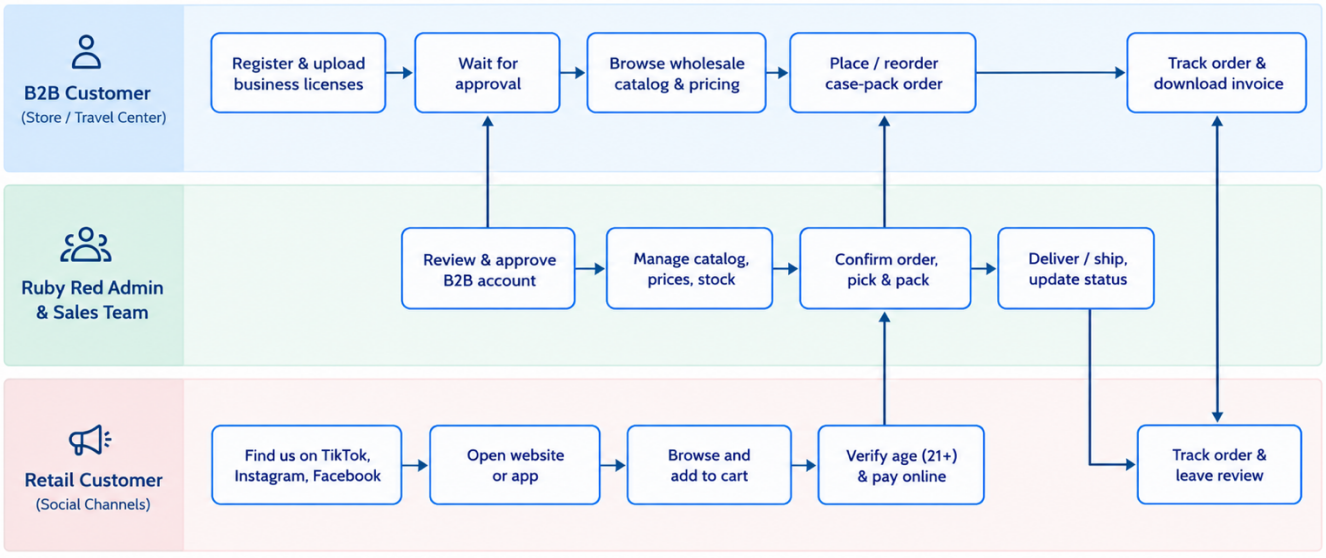

23. Data Model / High-Level Entities

Entity	Description
User Accounts	Account details, roles (B2B, Retail, Admin), contact details, and status.
Business Profiles	Business name, address, licenses and documents, approval status, pricing group, and credit terms.
Products / Photos	Product details, SKU, brand, pack size, prices, stock, flags, status, and up to 8 photos.
Categories	Exotic Snacks, Beverages, Chocolates, Toys, Novelty, Phone Chargers & Accessories, and Vapes, with sub-categories if provided.
Price Lists	Retail, wholesale, tiered, and customer-specific prices.
Wishlist / Saved Items	Items saved by a customer.
Carts / Order Templates	Current carts and saved B2B templates.
Orders / Order Items	Purchases, quantities, prices, taxes, fees, discounts, and order status.
Payments / Refunds / Invoices	Gateway transactions, offline payments, credit balance, refunds, and invoices.

Entity	Description
Delivery / Shipments	Delivery areas, schedules, carrier, tracking number, and status events.
Age Verification Records	Verification method, result, and time for each age-restricted purchase or account.
Promotions / Coupons	Discount rules, codes, targeting, validity, and usage.
Support Requests	Issue type, description, photos, decision, and history.
Reviews / Ratings	Star rating and comment tied to an order item.
Addresses	Delivery and billing addresses.
Campaigns / Social Links	Shareable links, tracking tags, and channel results.
Notifications	Push, email, and SMS alerts and delivery status.
Admin Users / Audit Log	Admin accounts, permissions, and recorded actions.

24. Main User Workflows

The diagram below shows the main flow between B2B customer, Ruby Red admin team, and retail customer.

25. Edge Cases & Exception Handling

Scenario	Recommended System Behavior (Pending Confirmation)
Product goes out of stock while in cart	Show a clear message at checkout, let the customer remove or reduce the item, and notify when back in stock.

Scenario	Recommended System Behavior (Pending Confirmation)
Price changes after item is added to cart	Show the latest price at checkout and clearly tell the customer about the change.
Payment fails or is declined	Show a clear message, keep the cart, and allow retry or another payment method.
B2B order below minimum value	Block checkout and show how much more is needed.
B2B account pending or rejected	Show retail view only (or limited access) with a clear status message and contact option.
B2B customer exceeds credit limit or has overdue balance	Block pay-on-account orders and show other payment options; notify the Admin.
Customer fails age verification	Block the restricted item, keep other items, and show a clear message.
Underage or unverified user opens a restricted product link from social media	Show an age gate and do not display the product until verified.
Delivery address outside service area	Show a message and offer pickup or contact support.
Order missed before delivery cut-off	Move delivery to the next available day and tell the customer.
Item missing, damaged, or wrong on delivery	Customer raises a support request with photos; Admin decides replacement, credit, or refund.
Customer cancels after order is confirmed	Block cancel in the app and send to support for manual handling.
Coupon expired or not eligible	Show a clear message and keep the cart unchanged.
Same coupon or promo misused	Limit usage per rule and let the Admin disable or review it.
Duplicate registration for the same business	Detect similar details and send to Admin for review.
Social link opens a removed or hidden product	Show a "no longer available" page with similar products.
Payment succeeds but order is not created	Retry automatically, alert the Admin, and refund if the order cannot be completed.
Suspended customer has open orders	Block new activity, let open orders finish, and keep the history.
Push notification not delivered	Retry, fall back to email or SMS for key events, and log the failure.
Review is abusive or fake	The Admin can hide or remove it.

26. Assumptions

The following assumptions have been made in preparing this document and should be validated by the client.

- The project delivers a responsive website, native-quality iOS and Android apps, and a web Admin Dashboard; the technology stack is at Wappzo's discretion.

- Business (B2B) customers are existing Ruby Red customers who are approved by the Admin before seeing wholesale prices.
- Retail customers are individuals reached mainly through TikTok, Facebook Marketplace, and Instagram, who buy through the website or app.
- The platform serves customers in Houston, Texas and nearby areas at launch; delivery coverage and fees will be provided by the client.
- Ruby Red uses its own delivery for business customers; a third-party shipping carrier may be used for retail orders (to be confirmed).
- A third-party payment gateway supporting cards, Apple Pay, Google Pay, and ACH will be used; the provider will be confirmed by the client and Wappzo.
- Age-restricted products, including vapes, will be shown only to eligible and verified users and will not be promoted through social media or app store listings unless the client confirms it is allowed after legal review.
- A third-party age or identity verification service may be used; the provider will be confirmed.
- Pricing, minimum order values, tax rules, credit terms, delivery rules, return rules, and promotion rules will be provided by the client.
- Existing product, customer, and price data will be provided by the client in Excel or CSV for import.
- The website and apps will be in English at launch.
- Admin permission levels (for example Super Admin, Sales, and Support) will be confirmed during design.
- The client provides branding, logo, product photos, policy and legal texts (terms, privacy, returns, age policy), and developer accounts for the Apple App Store and Google Play.
- Integration with the client's existing billing or inventory software is not included unless confirmed.

Key Items to Be Confirmed by the Client

#	Item to Confirm
1	Whether age-restricted products (vapes) will be sold in the mobile app and retail website, and how social media and app store policies will be handled.
2	Licenses and documents required for business approval, and tax-exempt handling.
3	Payment methods for each customer type, including credit terms and ACH.
4	Delivery model for retail customers (local delivery, shipping carrier, pickup) and delivery areas.
5	Pricing structure: wholesale tiers, customer-specific prices, and minimum order values.
6	Integration with existing inventory, billing, or accounting systems.
7	Return, refund, and replacement policy.
8	Number of expected products, customers, and orders at launch.
